PROFILE

Frontend and Web3 Developer building secure, production-grade web applications and on-chain products across Celo, Base, Stellar, and Starknet. On the frontend I work with React, Next.js, TypeScript, and Tailwind CSS; on-chain I develop smart contracts in Solidity, Cairo, and Soroban — including privacy-preserving applications powered by zero-knowledge proofs. I have shipped two live products with real users: a blockchain payment protocol and an on-chain football prediction platform. I care about clean architecture, low-friction user experiences, and building things people actually want to use.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, Mobile-First Design

Backend: Node.js, REST APIs, Authentication, Databases, Next.js API Routes

Smart Contracts: Solidity (Ethereum/Base), Cairo (Starknet), Soroban (Stellar), Zero-Knowledge Proofs

Web3 Integration: Wallet connections, contract interactions, transaction handling, Privy, on-chain data, Celo

Tools & Workflow: Git, GitHub, Vercel, Agile/async collaboration, code reviews, CI workflows

Enterprise: Microsoft Power Platform (Power Apps), workflow automation, Microsoft Excel

LIVE PROJECTS

Gigipay — Blockchain Payment Protocol *2025 – Present*

gigipay-app.vercel.app · Next.js, TypeScript, Celo, Base, Privy, REST APIs

- Built a fully live, Celo-powered on-chain payment platform enabling users to send crypto to multiple wallet addresses in one batch transaction — cutting gas costs and saving time.
- Implemented a claim-code voucher system that lets senders pay without knowing the recipient's wallet address; recipients redeem via Gmail login with an auto-created embedded wallet, reducing Web3 onboarding friction to near zero.
- Integrated Privy for Gmail-to-wallet onboarding so non-crypto users can receive on-chain funds without MetaMask or seed phrases.
- Shipped Batch Payments, Voucher Creation & Claiming, Airtime top-up (MTN, Glo, Airtel, 9mobile), and Token Swap — all production-deployed on Celo and Base.

DegenHub — Solana Telegram Bot Studio *2025 – Present*

degenhub.vercel.app · TypeScript, NestJS, Telegraf, @solana/web3.js, Helius, Jupiter API

- Built and launched a live Telegram bot studio for the Solana ecosystem, delivering real-time wallet tracking, portfolio insights, and on-chain trade alerts directly inside Telegram — no signup, no custody, nothing to install.
- Engineered DegenTrack, a real-time Solana wallet tracker using @solana/web3.js onLogs() subscriptions over Helius WebSockets, detecting and parsing confirmed buy/sell transactions with sub-second alert delivery.
- Architected each bot as a NestJS service with Telegraf command handlers and a per-chat in-memory state machine for multi-step flows, keeping user data private and the system fully read-only (zero custody, no private keys on the server).
- Integrated Jupiter Price API and CoinGecko for SPL token and SOL/USD pricing, converting trade sizes to USD for user-defined alert thresholds, and used the Helius DAS API for full portfolio snapshots including SPL tokens.

PROFESSIONAL EXPERIENCE

Freelance / Open Source — Remote2024 – Present

Open-Source Contributor & Freelance Frontend Developer

- Shipped responsive UI components across 3+ open-source and freelance web projects, improving cross-device usability for real-world user bases.
- Developed smart contracts and Web3 integrations across Stellar (Soroban), Starknet (Cairo), and EVM chains as part of open-source ecosystem contributions.
- Collaborated with distributed teams via Git & GitHub — managing branches, pull requests, and code reviews to maintain code quality.
- Integrated REST API endpoints into frontend interfaces, enabling dynamic data rendering and improved interactivity.
- Diagnosed and resolved 10+ bugs across active repositories using structured debugging, cutting reported UI defects by an estimated 30%.

Best Solution International — Abuja, NigeriaJun 2022 – Jun 2023

Service Teacher (NYSC)

- Delivered technical science curriculum to 30+ students, sharpening the ability to communicate complex concepts clearly — directly applicable to stand-ups, code reviews, and client interactions.
- Designed structured lesson plans and performance records, reinforcing organisational skills now applied to project planning and task management.

Tower Galvanised Products — Kaduna, NigeriaMar 2019 – Dec 2019

Production Assistant

- Maintained detailed daily production records with zero data-entry errors over an 8-month tenure, cultivating precision now applied to code and technical documentation.
- Identified and escalated 15+ recurring production anomalies using root-cause analysis — a methodology directly transferable to debugging.

EDUCATION

Higher National Diploma (HND) — Mechanical Engineering2018 – 2021

Federal Polytechnic Bida

National Diploma (ND) — Mechanical Engineering2015 – 2017

Federal Polytechnic Bida
